We're a leading shoe manufacturer set out to increase health and wellbeing for people on their feet all day and to reduce and prevent pain in the workplace. Did you know that **90% of workers** that spend the majority of the working day on their feet have experienced pain in the last 12 months as result of their work. Being on your feet all day has a huge impact on the body and leads to a real problem in health and wellbeing, particularly musculoskeletal disorders (technical word for pain!).

Partnership with Salford University

Working closely with experts at the University of Salford, we study how being on your feet all day can have an impact on not only your feet, but your ankles, knees, hips and lower back, but in fact your whole musculoskeletal system.

The biomechanical data and knowledge of advanced ergonomics we gain from our research helps us to design shoes specifically for you, reducing pain and fatigue at the end of long shifts.

This collaboration has resulted in a **90%** reduction in pain for these workers. That's significant. This clearly increases wellbeing and leads to gains in productivity.

WearerTech Sustainability Loop

Reducing Waste. Extending Life.

Over **300M** pairs of shoes are thrown out a year in the UK.

Shoes can take **30-40** years to decompose in landfill.

Visit [our website](#) to find out more about the scheme

The WearerTech Impact

It's fairly obvious that when you're comfortable you give more than when you're in pain. We always knew that but one of our global customers has carried out an independent study which told us something pretty incredible...

26.2%

Increase in Productivity

Increase in number of completed tasks.

85%

Increase in Customer Experience

Of candidates increased their contribution towards improved customer experience.

38%

More employee engagement

It is shown that when staff feel cared for, employee engagement goes up by 38%

These results have blown us away. The fact that such significant impact can be made by simply changing the type of footwear is immense. Companies all over the globe are already purchasing footwear for their staff. WearerTech allows them to take that existing expense and turn it into a productivity driving investment.

UltraGrip®

Our very own 5 star non-slip technology

You know by this stage that we've put heaps of effort into making sure you're comfortable on your feet all day but we're passionate about safety too. That's why we've been awarded the 5 star slip rating by HSL.

What does this mean for you the wearer? The 5 star slip rating is really the best of the best, and the test is really thought to represent real situations when working on your feet all day.

You can read more about the HSL slip rating [here](#) >

The main features of our UltraGrip® technology are:

- 1 Large channels which allow fast dispersion of fluids and particles.

The heel strike at the back of the shoe is angled at 7° meaning that as wearers put their foot down, slip resistance is introduced instantly at the first point of contact.

2

Customise your comfort to the shape of your feet

This range comes with a choice of three insoles, offering firm, medium and soft support, depending on the shape of your feet. [Visit page 17 to find out more >](#)

- o **Ultra-Grip® 5 Star Rated Non-Slip Technology**

Our very own tread pattern and compound is designed and tested to keep you safe at work. **Read more about our UltraGrip technology on page 5 >**

- o **Stretch Linings**

The smooth lining has been engineered to eliminate rubbing and discomfort and to give you a more comfortable fit

- o **Breathable Uppers**

Air flow through the shoe helps to keep your feet at a comfortable temperature and improves your foot health.

- o **Raised Heel**

We raised the heel of our midsole which helps to eliminate the build-up of plantar pressure that comes from being on your feet all day. This also improves your standing posture, reducing lower back pain.

- o **Energy Absorbing Midsole**

The midsole of the CustomPro range is made up of 1000's of tiny air bubbles. These are compressed to provide cushioning, shock absorption and distribute any

- o **Lightweight**

Science has shown that only a few grams of weight can make a big difference to minimising the stress and strain on your muscles in your feet and legs throughout the day.

- o **Contemporary Design**

A clean and stylish design that suits your needs and fits in with your uniform policy.

- o **Vegan Friendly**

All the materials used to manufacture our shoes are meat-free

CustomPro Modular Insole Technology

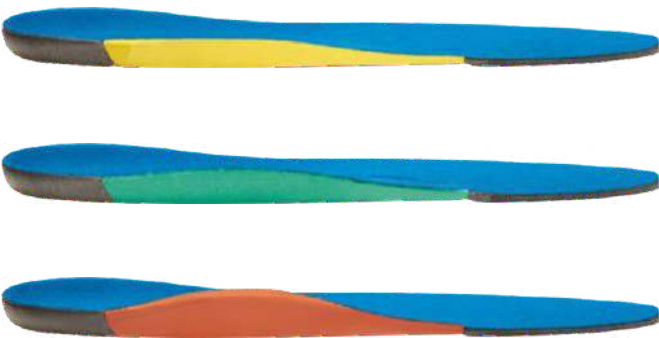

Customise your comfort to the shape of your feet.

Feet come in all shapes and sizes. That’s why one shoe that works for you might not work for someone else. What if you could have a work shoe that you could personalise to the shape of your feet?

This new modular technology means that you can switch your arch support from soft, medium or firm using a jigsaw piece concept where the arch piece simply pops in and out.

Side profiles of arch pieces:

How do I decide which arch piece is right for my feet?

<div> </div>		What type of foot arch do you have when standing?		
		Low Arch	Medium Arch	High Arch
How do you prefer a shoe to feel under the arch of your foot?	Soft material with less support			
	Medium firmness with some support	Medium	Low	Low
	Firm material for more support	High	Medium	Low
		High	High	Medium

Comfort that moulds to the shape of your feet

A range of shoes that provide that extra cushioning as well as maintaining a good level of support around the arch area.

- Ultra-Grip® 5 Star Rated Non-Slip Technology

Our very own tread pattern and compound is designed and tested to keep you safe at work. **Read more about our UltraGrip technology on page 5 >**

- Moulds to the shape of your feet

The material we use to make this range is made up of thousands of air bubbles which are designed to mould to the shape of your foot and to provide soft cushioning.

- Energy-Absorbing

The material used is designed to give you a spring in your step, the small air bubbles absorb the energy and then rebounds back, taking the stress and strain out of your feet and legs.

- Lightweight

Science has shown that only a few grams of weight can make a big difference to minimising the stress and strain on your muscles in your feet and legs throughout the day.

- Supportive Foot Shape

This range features an ergonomically designed footbed which provides you with support in areas you need it most, this eases the long days on your feet and helps to improve your posture, reducing lower back pain.

- Vegan Friendly

All the materials used to manufacture our shoes are meat-free.
